EMERGENCY RESPONSE PLANS

Development of Emergency Response Plans

Risktec has vast experience in the writing and development of industry 'best practice' Emergency Response Plans for a variety of facilities from platforms to pipelines.

If your facility has been operating for a number of years and undergone various modifications, Risktec will conduct an onsite review of your ERPs to ensure their accuracy and efficiency.

EMERGENCY RESPONSE EXERCISES

Development, Conduct and Reporting of Multi Site Emergency Response Exercises

Ensure the validity of your company's Emergency Response Plans, Emergency Management training and Corporate Procedures by exercising all aspects from the Platform to the Head Office.

Risktec will develop, script and run Emergency Response exercises using realistic scenarios and involving all required ER elements, from the onsite ER Team through to the Global Head Office. Our experienced ER consultants will provide your personnel with realistic experience dealing with external agencies such as the Next of Kin, Media and Government departments in an emergency situation.

We will provide you with immediate feedback for the most critical observations and provide a detailed Post Exercise Report with recommendations to improve your Emergency Management performance.

EMERGENCY CONTROL ROOM

Emergency Control Room Design and Fit Out

Using our vast experience in the Emergency Management environment, Risktec can assist you with the design and construction of your Incident Control Room.

Whether it is to be a dedicated facility or a multi functional room used on activation, Risktec can provide you with the most functional design, conforming to your operational procedures and manning levels.

Risktec will optimize the available space and deploy the most effective communications technology for your needs and budget, with consideration to your operating environment.
